n/a	River Trothy	SO 51571162 (start) & SO 36562250 (finish)	c.33 km	River	Otter White clawed crayfish	<p>The River Trothy (a tributary of the River Wye) flows through north Monmouthshire. It rises on Campston Hill, northeast of Abergavenny and flows southwards until Llanvapley, where it turns east. It flows through Dingestow before to Mitchel Troy where the river runs beneath the A40 before flowing to the south of Monmouth and joining into the River Wye, about 0.5 km downstream from the mouth of the River Monnow.</p> <p>The River Trothy flows on Devonian sandstone. From source to mouth the River Trothy has dug deeply into sandstone and been modified by 'improvement' works. Bank habitats are much reduced since many have been trampled and formed from dredging and deepening work. The majority of the valley is used as grazing land with small arable areas too. Woodlands are adjacent to some stretches of river and create densely shaded stretches of riverbed.</p>	H15 Watercourses, S1 Mammals S2 Birds S5 Fish S6 Invertebrates+H20
