FULL DESCRIPTION OF SITE (including topography, adjacent land use, boundaries etc.):

Part of a south-facing gently sloping field located on the northern side of St Arvans surrounded by species-rich and species poor hedgerows to the south and west. The site is bordered by housing to the south, pasture to the north and east and a steep sided stream valley with woodland to the west.

The majority of the field comprises grazed grassland including a high proportion of forbs many of which are neutral grassland 'indicator' species including abundant *Hypochoeris radicata* and *Lotus corniculatus*, with frequent *Centaurea nigra*, *Leucanthemum vulgare*, *Ranunculus acris*, *Leontodon hispidus*, *Achillea millefolium* and occasional *Stellaria graminea* and *Briza media*.

Further north in the same field there is a steeper south facing section of the field that was briefly walked over but not surveyed in detail. Here, there were patches of dominant bracken with a similar suite of species to those described above with the addition of *Polygala vulgaris*.
