SKETCH MAP OF SITES LOCATION:

FULL DESCRIPTION OF SITE (including topography, adjacent land use, boundaries etc.):

The site is located on steeply to moderately sloping west facing ground towards the north of Tintern Parva. The site is surrounded by farmland, woodland, housing, gardens, and Trelleck Road. Approximately 50m south west of the site is located the Barbadoes Hill SSSI.

The site itself contains two distinct habitat types. The north western section of the site is deciduous broadleaved woodland and south eastern section is a steeply sloping bank of species-rich grassland that is notable for a high percentage cover of forbs including many more typical of woodland habitats. The presence of *Viola canina* and the woodland character of the site as a whole may offer some potential for fritillary butterflies. Bare ground accounts for approximately 5% of the field and forbs cover approximately 65% of the field and grasses accounting for about 50%. Species that are notable for their relatively high abundance for this type of habitat include *Lotus corniculatus*, *Stellaria holostea*, *Lathyrus pratensis* and *Cardamine pratensis*. The site is shaded by trees to the north and those along eastern boundary which, in combination with the abundance of species such as *Primula vulgaris*, *Hyacinthoides non-scripta* and *Stellaria* sp. provide a woodland ride-like character to the south of the site.

The site has the potential to support bats, nesting birds and small mammals including dormouse. Boundaries comprise species-poor hedgerows to the west and a line of mature trees to the east.

Is/are the owner(s) i) aware of the site's nature conservation value? Yes No
 ii) managing the land sympathetically? Yes No
 iii) willing to manage the land sympathetically? Yes No Unknown

Describe the access to the site:

Site is immediately adjacent to Trelleck Road in Tintern Parva. A gate mid-way along the southern western boundary of the site allows entry.

Are there any public rights of way on the site?

No

If so please describe their location:

What is the current management at the site?

The grassland area is currently grazed by goats seemingly all year round at a low density (two animals during the survey). There was no evidence of management in the woodland to the west of the site.

Are there any threats to the site?

Yes, LDP Potential Village site PV27

Are there any invasive species present?

Bracken forms a complete canopy cover over approximately 25% of the broadleaved woodland component of the site.

Are there any protected species present?

Unknown

Please state the section(s) of the Wildlife Site Guidelines that this site qualifies under:

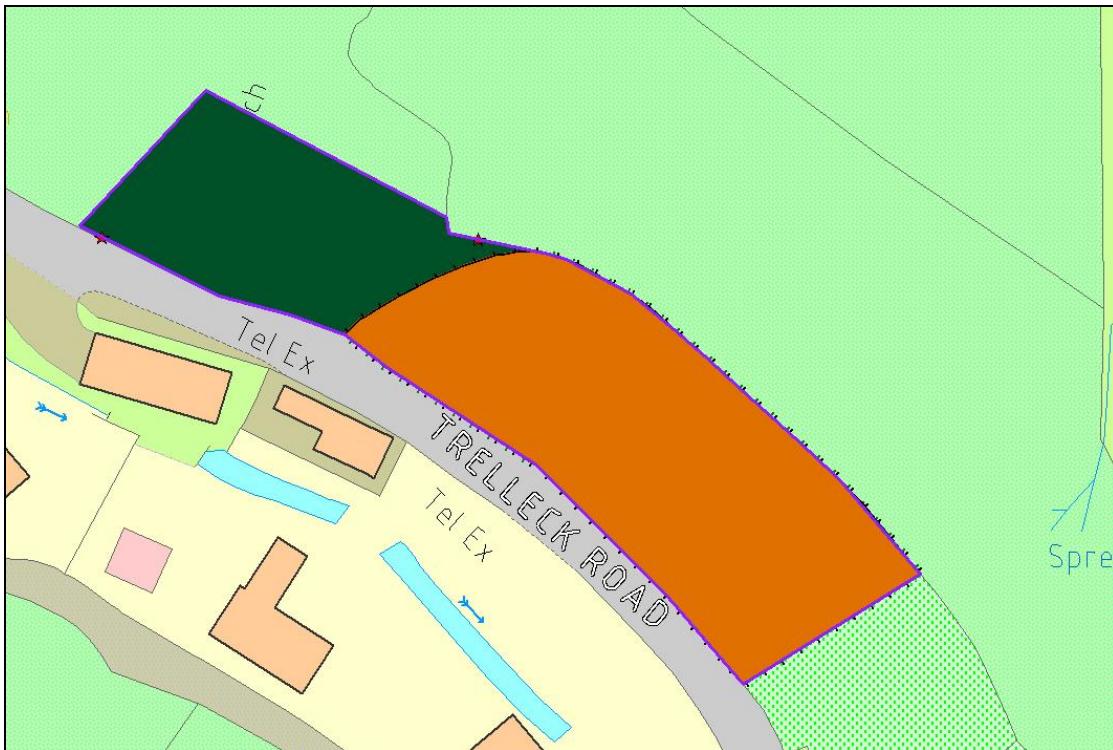

H4 neutral grassland

H1 Woodland - Likely that this could link with woodland outside of the site boundary

Is the site part of any grant schemes? Yes No Grant Scheme:.....End date:.....

Does the site already have any designations? Yes No Designation:.....
