WS/SO30/21	Springfield	SO329042	4.18 ha	Neutral Grassland - Species Rich MG5 and MG6 Hedgerow Mature Trees Pond	Species Rich Grasslands (HAP)	Two hay meadows located south-east of Penperlleni: The field farthest north has the driveway to the house through it and the bungalow itself which is surrounded by mature conifers all the way around. The southern most field is large and predominately of MG6 vegetation type with patches of more species-rich grassland throughout. A dried up pond is found in the bottom end surrounded by scrub and several mature Oak trees. The field to the north is more diverse although bracken is encroaching around edges. There is a wet area that holds water in the winter creating further diversity within this field. Hedgerows line the site and are tall and thick with some suitable for laying. The site has been cut for hay for many years but would also benefit from aftermath grazing.	H4 Neutral Grasslands
