	Sunnyside, Monkswood	SO337037	1.25ha	Species Rich Grassland	Species-rich grassland	<p>This site is two meadows immediately adjacent the house. The fields have been horse grazed in the past but are not at present. The fields are flat, but slope very gently downwards towards the north. Hedgerows are present around much of the fields except where they border the gardens of "Sunnyside" to the south-west. A road lies to the south also, together with adjacent fields of an improved nature. The fields are diverse and very "flowery" with Ox-eye Daisy (<i>Leucanthemum vulgare</i>) and Rough Hawkbit (<i>Leontodon hispidus</i>) being particularly abundant and noticeable with much Common Knapweed (<i>Centaurea nigra</i>) and Red Clover (<i>Trifolium pratensis</i>) also. Field 1 is more diverse than Field 2 although both are of good quality. A particular feature is the presence of four orchid species within Field 1 (Common Spotted (locally frequent), Southern Marsh (few spikes), Common Twayblade (locally frequent) and most notably Bee Orchid (11 spikes in one small area).</p> <p><i>Neutral Grassland: Field 1= 19 indicators, Field 2 =12 indicator species</i></p>	H4) Neutral Grasslands - over 8 indicator species. (12 species recorded)
