| WS/SO31/01 | Wernyrheolydd Meadow | SO385131 | 1.17 ha | Species Rich Neutral Grassland (MG5 and MG6) Marshy Grassland Bracken/Scrub Broadleaf Woodland | Species Rich Grasslands (HAP) | A neutral meadow in need of management situated c0.5km north west of Wernyrheoldd, with a mixture of wet and dry meadow communities. <i>Pteridium aquilinum</i> is frequent on a slight bank at the site's west and an associated litter layer is present in places. Bracken is also scattered at variable frequencies throughout the rest of the site. A small stream runs north-south through the site which is dominated by <i>Oenanthe crocata</i> . In the vicinity of the stream relatively rich marshy grassland exists featuring locally frequent <i>Mentha aquatica</i> , <i>Filipendula ulmaria</i> , <i>Juncus articulatus</i> and <i>Iris pseudacorus</i> . A patch of <i>Polygonum bistorta</i> is also present and in the north east corner of the site a patchily distributed wet community (including <i>Caltha palustris</i> , <i>Angelica sylvestris</i> , <i>Valeriana dioica</i> and <i>Lychnis flos-cuculi</i>) is present under the canopy of a small area of wet woodland. Towards the eastern edge of the site a drier neutral grassland community exists including frequent <i>Lotus corniculatus</i> and <i>Centaurea nigra</i> . This vegetation becomes taller, ranker and more grass dominated. | H4 Neutral Grasslands H7 Marshy Grasslands |
