WS/SO40/03	Twyn - Gorse	SO472038	1.49 ha	Neutral Grassland (MG5 and MG6) Acid Grassland	Species Rich Grassland (HAP)	The site is part of a larger area of interest located to the south and east. This site comprises of 2 species rich meadows with a field inbetween with an old quarry, but still with a diverse flora. Field 2 in particular is of great value. Field 1 has patches of acid grassland indicators. The ground is very uneven and it has mown paths around it. Garden rubbish is dumped at one point and a fire site is nearby. A large quarry rock face is located centrally and is surrounded by broadleaved trees. Field 3 is similarly species rich and lies adjacent to Lodge Meadows. Each field is surrounded by well structured hedgerows and a broadleaved woodland with some conifers lying to the north with improved pasture to the west. The fields have been hay cut in the past, although not last year.	H4 Neutral Grasslands
