WS/SO40/05	The Lodge Meadows	SO474039	2.31 ha	Neutral Grassland (MG5 & MG6) Scrub	Species-Rich Grassland (HAP)	The site lies adjacent to other species-rich meadows to the west and south, part of a large WS. It comprises 3 fields with another field lying between 1 and 2. It is currently involved in storing materials and equipment for barn conversion at one end but will eventually be put back to hay. Fields 1 and 2 are relatively species-rich although field 2 less so with only a scattering of indicators including <i>Centaurea nigra</i> , <i>Hypochaeris radicata</i> and <i>Lotus corniculatus</i> . Field 3 has a steep westerly facing slope and lies adjacent to Prysgr wood and Ancient Woodland. There are patches of scrub throughout and it has some interesting species including <i>Campanula rotundifolia</i> , <i>Centaurium erythraea</i> and <i>Euphrasia officinalis</i> . It has not been managed recently and a large veteran birch tree is located at one end. Whole site is rich in invertebrates. It is recommended the grassland in between field 1 and 2 is included in boundary as it is also of interest and forms a complete management unit.	H4 Neutral Grasslands
