WS/SO40/08	Cuckoo's Row Meadow	SO428085	0.42 ha	Neutral Grassland (MG5)	Species-Rich Grassland (HAP)	Semi-improved neutral meadow in need of some structured management to promote sward diversity. Vegetation is tussocks and rank in some places, especially the middle section near a couple of mature fruit trees. However, indicators of relatively species rich grassland are present and reasonably frequent throughout the meadow, including <i>Centaurea nigra</i> and <i>Lathyrus pratensis</i> . Site exists as a small pocket within an otherwise agriculturally improved local landscape. A small cluster of houses exist in close vicinity. A post and rail fence plus cut hedgerow border the site at its western edge. A road also borders the site at this edge, supporting a good quality species rich verge. Areas of scrub and a few standard oaks are present at the site's other margins.	H4 Neutral Grassland
