Site Code	Site Name	Grid Reference	Size	Main Habitats	LBAP Priority Habitats / Species	Full description	Wildlife Site Qualifying Features
WS/S04 0/15	Glanau Farm	SO495076	32.13 ha	Neutral Grassland (MG6b?/MG 5) Broadleaved Woodland	Neutral Grassland (HAP) Species-Rich Grasslands	The site encompasses the ownership of Glanau Farm with the exception of just 2 fields which are similar but lack a few indicator species. The species composition of each field is very similar and uniform; the hedges are all 'gappy' resulting in the animals grazing accessibly over the whole farm. The fields are tightly grazed pastures; however there is still a high frequency of forbs as a result of little previous improvement. Species found include <i>Ranunculus bulbosus</i> , <i>Trifolium pratense</i> , <i>Lotus corniculatus</i> , <i>Hypochoeris radicata</i> , <i>Leontodon autumnalis</i> and <i>Prunella vulgaris</i> . Other less commonly found are <i>Centaurea nigra</i> , <i>Stellaria graminea</i> , <i>Carex coryophyllea</i> , <i>Carex flacca</i> , <i>Leontodon hispidus</i> and <i>Vicia tetrasperma</i> . The site is very sheltered being surrounded by woodland and follows a small valley sloping to the west.	H4 Neutral Grassland
