WS/SO40/26	Ty Newydd Llangoven	SO473056	1.39 ha	Neutral Grassland (MG5 &MG6) Acid Grassland	Species-Rich Grassland (HAP)	The fields' flora is very diverse with a range of old meadow grasses and species such as <i>Centaurea nigra</i> , <i>Luzula campestris</i> , <i>Conopodium majus</i> & <i>Lotus corniculatus</i> . The westerly-facing fields slope down to the road, and lie behind the house & vegetable garden. A steeper slope on one field has more calcifugous species such as <i>Galium saxatile</i> , <i>Campanula rotundifolia</i> & <i>Polygala serpyllifolia</i> . Some <i>Pteridium</i> occurs around the edges of the fields. The fields have not been cut for two years, resulting in a build-up of thatch and a dominance of <i>Dactylis glomerata</i> . A hay cut is planned this year by the MMG. The owners are very keen to encourage wildlife. The fields are surrounded by tall, thick hedgerows.	H4 Neutral Grasslands
