Semi-improved Neutral Grassland	MG5 MG6	
Marshy grassland		
Semi-natural Broad-leaved Woodland Plantation mixed woodland		

LBAP PRIORITY HABITATS/SPECIES PRESENT?

H1) Woodlands
H4) Neutral Grasslands
H8) Marshy Grasslands

FULL DESCRIPTION OF SITE (including topography, adjacent land use, access and boundaries etc.):

Lower Gockett is a traditionally managed farm and includes seven fields of semi-improved neutral grassland with marshy areas and a diverse area of woodland; watercourses and areas of scrub add to the diversity of the farm. The low intensity management involving light grazing and an annual hay cut of the meadows characterises and maintains the diversity of these fields.

Field 1 is the most species-rich (12 indicators), with the greatest diversity along the lower slope and near the wet flushing; the notable species *Silvaum silaus* grows here. Other indicator species include *Agrimonia eupatoria*, *Danthonia decumbens*, *Carex flacca*, *Centaurea nigra*, *Trifolium pratense*, *Stellaria graminea*, *Lathyrus pratensis*, *Lotus corniculatus*, *Hypochoeris radicata* and *Hypericum maculatum*.

Fields 4 and 5 are botanically diverse and characterised by dry grassland on sloping ground, wet flushing, marshy areas and scrub, providing a diversity valuable of habitat for insects, amphibians and small mammals. Plant species include *Agrimonia eupatoria*, *Vicia cracca*, *Lotus corniculatus*, *Stellaria graminea*, *Lathyrus pratensis* and *Centaurea nigra*. In the marshy areas species include *Juncus acutiflorus*, *J.conglomeratus*, *J inflexus*, *Lotus uliginosus*, *Mentha aquatica*, *Pulicaria dysenterica*, *Angelica sylvestris*, *Galium palustre* and *Carex flacca*. The marshy areas support 13 marshy grassland indicator species.

Fields 3, 6, 8 and the level areas to the west of field 2 have a similar species composition, being grass dominated with some of the indicator species at a low frequency. Species include *Lotus corniculatus*, *Trifolium pratense*, *Stellaria graminea*, *Vicia cracca*, *Lathyrus pratensis*, *Hypochoeris radicata* and *Centaurea nigra*. However, the banks and sloping areas particularly in the south east of field 2 have a greater diversity and frequency of indicators; additional species found here include *Dactyloctenium aegyptium*, *Carex flacca*, and *Potentilla erecta*. Field 3 and field 8 are the least species rich with just 6 and 5 indicator species recorded respectively.

The woodland Perth Hir, has been planted with conifers in the past, however it has large areas of broad-leaved species and supports a rich woodland flora (18 Indicator Species). Species include *Mercurialis perennis*, *Hyacinthoides non-scripta*, *Paris quadrifolia*, *Epipactis helleborine*, *Carex sylvatica*, *C. remota*, *C.pendula*, *Primula vulgaris*, *Festuca gigantea*, and *Polystichum setiferum*.

Describe the access to the site:

From the farm.

Are there any public rights of way on the site?

Yes

If so please describe their location:

See OS map.

What is the current management at the site?

Hay meadow and pasture management.

Are there any threats to the site?

Not known.

Are there any invasive species present?

None seen.

Are there any protected species present?

Not known.

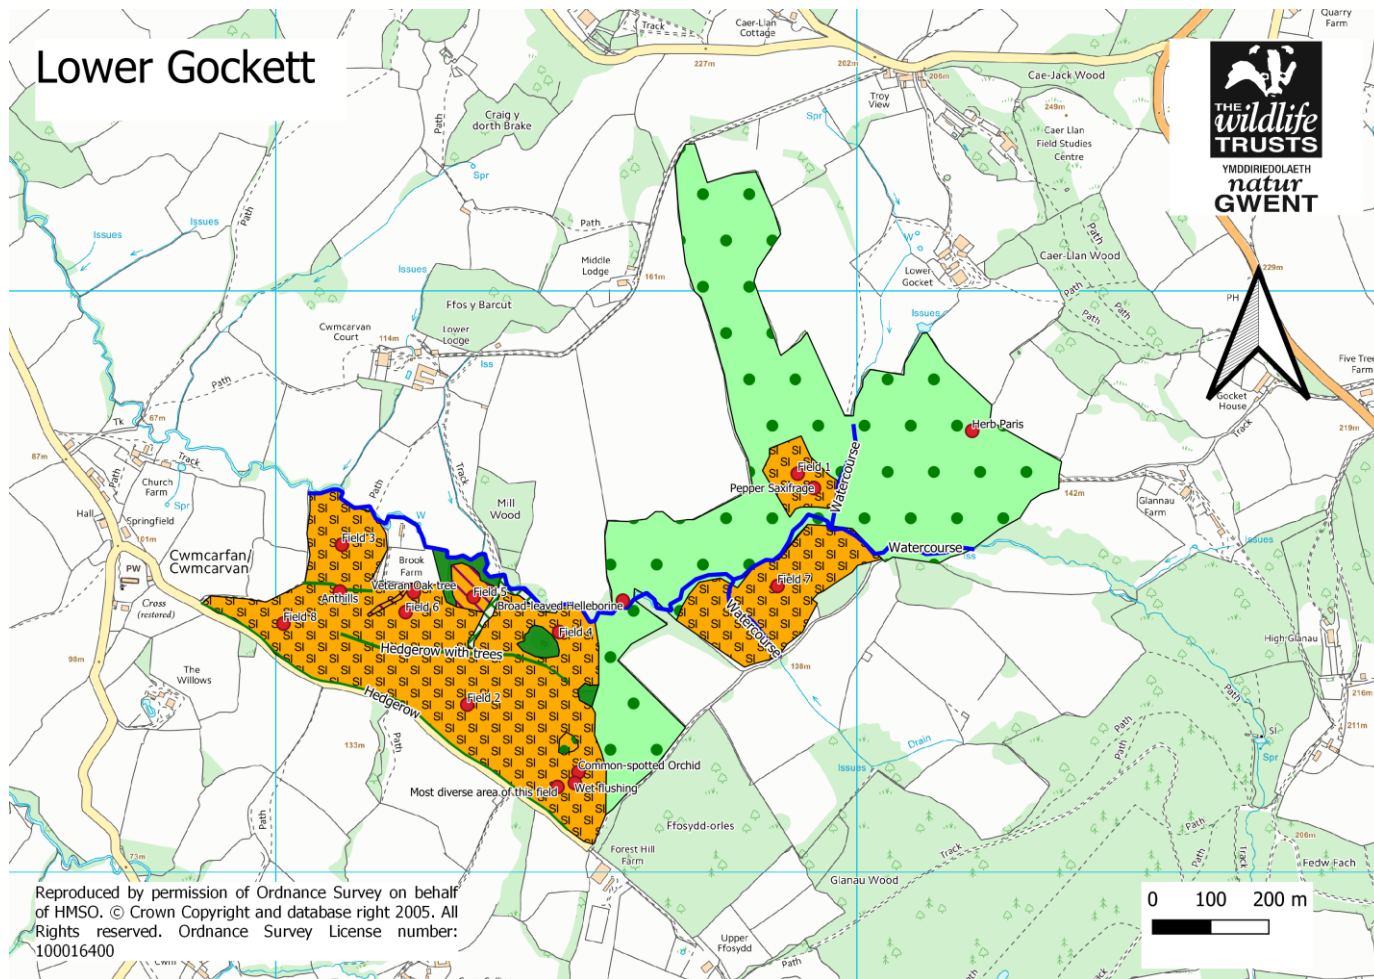

Please state the section(s) of the Wildlife Sites Guidance that this site qualifies under:

H1) Woodlands	Indicator species (18 indicator species recorded)
H4) Neutral Grasslands	Indicator species (5 to 12 indicator species recorded in individual fields)
H7) Marshy Grasslands	Indicator species (13 indicator species recorded)

Is the site part of any grant schemes? Yes No Grant Scheme:.....End date.....

Does the site already have any designations? Yes No Designation:.....

Key to colour coding of grassland species list

Species in **Bold** equals indicator species for Neutral grasslands

Species in **Blue** equals indicator species for Marshy grasslands

(Please note other species in list may be indicator species for other grassland types and these have been taken in to account when assessing overall value of the site).

Species in **Bold and underlined** equals a species from the contributory species list.

Species in *red italics* equals a species from the primary species list.
