WS/SO41/01	Wonastow Field	SO494124	2.98 ha	Neutral Grassland (MG6) Marshy Grassland	Species Rich Grassland (HAP)	A large field located at the back of the Wonastow Industrial Estate. The southern end has quite dry species poor grassland but further north a rich wet grassland can be found. The field is relatively level with a public footpath running through it. It is surrounded by tall, thick species rich hedgerows with several mature oak trees scattered throughout the boundaries. The field is popular with dog walkers and is used by GOS for bird watching in Autumn/Spring for birds such as siskin, brambling and yellowhammer. The grassland has become very tussocky due to the management recently, and is desperately in need of cutting/grazing although it is not stockproof. The site is surrounded by species poor grassland that is grazed to the west but unmanaged to the east of the site.	H4 Neutral Grasslands
