	Village Farm	SO495103	3.10 ha	Species rich neutral grassland	HAP neutral grassland	<p>This is a hay meadow that slopes downwards to the west. It is surrounded by hedgerows on all sides. The field has not been ploughed for 50 years and has had minimal fertiliser added over the last 30 years. The field is very flowery with Yellow Rattle (<i>Rhinanthus minor</i>) and Red Clover (<i>Trifolium pratense</i>) being particularly abundant and noticeable together with Lesser Trefoil (<i>Trifolium dubium</i>). The diversity is reasonable with a number of indicator species present, although most are not particularly abundant apart from the Yellow Rattle and Red Clover. The field has apparently been increasing in floweriness over the years and with the abundance of Yellow Rattle suppressing the grass it is likely to further increase in wildlife value. The field to the east (similar Hay Meadow) and south (Grazed pasture) are in the same ownership and also have some value with a number of indicator species present but are not as species rich at present.</p>	H4) Neutral Grassland (11 indicator species)
