WS/SO50/02	Rock Cottage Meadow	SO502069	0.65 ha	Neutral Grassland (MG5) Scrub	Species-Rich Grassland (HAP)	The site is located across the road to the east of New Grove Meadows. It is a dry species-rich grassland with a gentle westerly facing slope. The field has not been cut recently and a thatch is starting to form. It is not stockproof and urgently requires a cut and some aftermath grazing. The field is surrounded by tall thick hedging apart from along the southern side which is tree lined and borders the driveway. A gap in the hedge along the boundary bordering the road is used as access for cars for an event occurring at the house every year. Fields to the north and south are tightly horse grazed.	H4 Neutral Grasslands
