

Site Code	Site Name	Grid Reference	Size	Main Habitats	LBAP Priority Habitats / Species	Full description	Wildlife Site Qualifying Features
WS/SO50/04	The Bowls Meadow	SO522082	6.12 ha	Neutral Grassland (MG5 & MG6)	Species-Rich Grassland (HAP)	<p>The site is located in Tre-gagle and is part of a bigger WS that includes land to the south east and south west of this site. The site comprises of 4 small fields with a track in between them and a large open area to the north west of these fields. One of the smaller fields has an old barn and in the large open area a larger barn stands with a moat around it. The grassland in one of the smaller fields is particularly rich and of WS quality, the remaining grasslands, including the large open area, has occasional indicators of quality scattered throughout but does not quite meet the threshold necessary for selection. It is recommended, however, this area is included in the boundary due to the whole site being part of a bigger WS in Tre-gagle with qualifying land lying adjacent. The fields are all cut for hay in July. A conifer woodland that has recently been de-conifered lies to the east of the site.</p>	H4 Neutral Grasslands
