WS/SO50/10	Byeways Meadows	SO530058	0.48 ha	Neutral Grassland (MG5) Scrub	Species Rich Grassland (HAP)	A small triangular shaped meadow adjacent to Manor Wood in Pen-y-Fan. The grassland has not been grazed or cut for some years but it is still quite species rich. The grassland is dry and becomes ranker toward the western corner where an old shed is located with mature trees from Manor Wood shading the grassland. The field has a gradual northerly facing slope and bracken and bramble is starting to encroach along the north and eastern boundaries. The southern boundary is bordered by a road and the eastern side borders a garden, both these boundaries are lined by a hedge. The grassland is becoming quite tussocky and needs urgent management.	H4 Neutral Grassland
