WS/SO50/65	Pen-y-fan	SO529055	3.52 ha	Neutral Grassland (MG5)	Species Rich Grassland (HAP)	<p>Small block of fields at Pen-y-fan that adjoins other species rich grasslands to the North East and South West. Fields 2, 3 and 6 are the most diverse with species including <i>Luzula campestris</i>, <i>Centaurea nigra</i> and <i>Hypochaeris radicata</i>. Fields 1, 4 and 5 are borderline examples, however field 4 has <i>Dactylorhiza fuchsii</i> present with frequent anthills throughout adding to its value. In addition to this because of the field's location and being part of a block of important grasslands it is recommended that they are included in the WS boundary. The fields are all sheltered with mature trees, overgrown hedges and walled boundaries in between. In the later survey a spike of <i>Platanthera chlorata</i> was found but this needs confirming in field 2. The fields are horse grazed, some quite heavily, although fields 1 and 2 appeared not to have been managed for a while.</p>	H4 Neutral Grasslands
