WS/ST39/02	White House Meadows	ST328955	9.79 ha	Neutral Grasslands (MG5 and MG6)	Species Rich Grasslands (HAP)	This site comprises of 2 areas not lying adjacent to each other but owned by one landowner. There are 2 meadows adjacent to the farm and 2 meadows to the south east. Fields 1 and 2 by the farm are MG6 neutral grasslands, looking very grassy but with a good diversity of indicator species throughout. Both fields have a south westerly facing gentle slope surrounded by thick diverse hedges. Fields 3 and 4 to the south east have more of a familiarity with MG5 neutral grasslands, being more diverse floristically and the indicator species appearing more frequently. Towards the western corner there is a large area dominated by <i>Rumex obtusifolius</i> . The fields are surrounded by more improved grassland, apart from the field adjacent to field 3 to the south west which is a poor example of an MG6 grassland, and although would not be of WS quality individually it could be included in the larger site.
