WS/ST48/02	Shirefield Meadow	ST466897	0.42 ha	Calcareous Grassland Scrub	Species-Rich Grassland (HAP) Greater Butterfly Orchid (SAP)	The site is located very near to GWT's Brockwells Meadows Reserve. It is a very species-rich site which is a mixture of calcareous grassland, scrub and area of more neutral grassland in patches. The site is quite flat and the grassland dry and there are several mature birch trees present. The perimeter of the site is dominated by scrub that is rapidly taking over the site and needs controlling. The grassland has previously been horse grazed quite heavily although now has little management, although it is stockproof with a watersupply. The site is located with 2 boundaries lying adjacent to the Shirefield Road and to the north and east semi-improved calcareous grassland owned by the golf course can be found.	H5 Calcareous Grassland
