WS/ST48/03	The Mount Meadow	ST461895	0.22 ha	Calcareous Grassland	Species-Rich Grassland (HAP)	The site is quite small but incredibly species-rich calcareous grassland that is currently grazed by one small pony. The landowners have owned the field for 45 years and report an increase in floristic diversity over this time. The field is relatively level and is well hidden from the road being surrounded by tall overgrown hedges apart from the north western boundary that borders the owners garden. The grassland is mainly dry throughout but is slightly damp in the southern corner.	H5 Calcareous Grassland
