WS/ST49/09	Mynydd-Bach Meadows	ST478941	2.79 ha	Neutral Grassland (MG5c) Neutral Grassland (MG5a) Neutral Grassland (MG6) Neutral Grassland(M1) Scrub	Species Rich Grassland (HAP)	The site is located at the crossroad between Mynydd-bach and Shirenewton and comprises one large field that slopes moderately northwards and contains dry neutral grassland with small stands of scrub. The site was viewed from the public footpath according to the owners wishes. Much of the grassland is MG5c with strong presence of <i>Succisa pratensis</i> , <i>Potentilla erecta</i> , <i>Danthonia decumbens</i> , <i>Lotus corniculatus</i> , <i>Stachys officinalis</i> , and <i>Pimpinella saxifraga</i> . MG5 a is also present with more <i>Centaurea nigra</i> , <i>Cynosurus cristatus</i> , <i>Trifolium pratense</i> , <i>Plantago lanceolata</i> and <i>Hypochoeris radicata</i> . The lower fields towards the road appear more impoverished and contain a greater frequency of coarse grasses and less herbs. The field was being grazed by a herd of cattle. A few thistles occur within this vegetation. One small area of grassland bordered by scrub had an appearance of a MG1 community with rank species dominant such as <i>Dactylis glomerata</i> and <i>Holcus lanatus</i> .	H4 Neutral Grassland
