WS/ST49/29	Ty Cefn Field	ST451905	0.5 ha	Neutral / Calcareous Species-Rich Grassland	Lowland Species-Rich Grassland (HAP)	Sloping north facing section of much larger, flatter field, (was originally separate field, but now boundary has been removed). Area 1 comprises species-rich neutral/calcareous grassland. Species present include frequent <i>Centaurea nigra</i> and <i>Lotus pedunculatus</i> , locally frequent <i>Succisa pratensis</i> , <i>Stachys officinalis</i> , <i>Briza media</i> , and locally occasional <i>Allium vineale</i> , <i>Carex flacca</i> , <i>Primula veris</i> and <i>Vicia cracca</i> . This area is long and rank with thatch building up underneath and tree saplings from adjacent woodland are beginning to establish. Where the slope/bank flattens out, the remainder of the field, to the south (Area 2) is much less diverse, with diversity decreasing to the north. This part has been more recently improved/ploughed. Species present include locally frequent <i>Centaurea nigra</i> and <i>Plantago lanceolata</i> , <i>Trifolium pratense</i> . Area 2 is managed as a hay meadow, Area 1 has been left unmanaged to allow wild flowers to grow, but now needs some management - horse grazing proposed autumn 07.
