WS/ST49/35	Old Cwm Mill	ST459928	0.17 ha	Calcerous Grassland CG Bracken/Scrub	Species Rich Grasslands (HAP)	A single small sloping field heavily encroached by bracken and scrub at the north and heavily poached with frequent bare ground at the base of the slope at the south. Beneath the bracken at the north west remnants of a calcareous grassland sward survive. <i>Primula veris</i> and <i>Centaurea nigra</i> are frequent, however other species are more limited in their distribution. These include the locally notable <i>Helianthemum nummularium</i> and <i>Scabiosa columbaria</i> . <i>Sanguisorba minor</i> and <i>Agrimonia eupatoria</i> are present but rare. <i>Ononis spinosa</i> recorded in CCW's Phase II Survey 1991 was not recorded on this visit. Herbs in the lower part of the field are limited to <i>Plantago lanceolata</i> , <i>Taraxacum officinale</i> & <i>Ranunculus sp.</i>	H5 Calcareous Grasslands
