WS/ST59/04	Wyndcliffe Wood Meadow	ST522969	2.03 ha	Neutral Grassland Species-Rich (MG5) Semi-Improved Grassland (MG6) Scattered Scrub	Lowland Species-Rich Grassland (HAP)	Species rich north-west facing bank of moderate to steeply sloping field. The flat north-east and south-east/south-west were less species rich-(improved), comprising typically frequent Field woodrush, Common sorrel, Ribwort plantain and occasional Cowslip. Steeper 'bank' running across the field from north to south comprises same locally species- rich areas, which were mainly in the centre of the field - the top section is becoming encroached in dense Bramble scrub and the southern section is flatter and more improved. Species include locally frequent Barren strawberry, Common bird's foot-trefoil, Meadow vetchling, Carnation sedge, Spring sedge, Cat's ear, Pignut and Knapweed. Occasional/rare species include Agrimony and Common spotted orchid. Management: needs scrub clearance, would benefit from less intensive management (i.e no further improvement).	H4 Neutral Grasslands
